SUMMARY

AI and Cloud Engineer with over four years of experience designing, developing, and deploying AI-driven applications. Specializes in building RAG-based chatbots and agent frameworks on AWS using Python, Bedrock, Lambda, and DynamoDB, optimizing inference costs and improving system scalability. Proven track record collaborating with cross-functional teams to integrate AI models into full-stack solutions and drive continuous dataset refinement.

WORK EXPERIENCE

Interstate | *Software Engineer*

Mar 2026 - Present

- Developed and launched an LLM insights pipeline that delivers real-time, cost-controlled market signals to traders using queue-based workers and multi-layer caching.
- Led a full redesign of the Predictions product on Next.js and React, delivering a trading-grade interface with interactive charts, responsive layouts, and an embedded AI insights experience that made complex market data feel intuitive across desktop and mobile.
- Architected and shipped a gamified leaderboard and rewards system end-to-end - schema, migrations, scheduled jobs, REST APIs, and UI integration - driving user engagement and retention across the platform.

Auto Club Enterprises (AAA) | *AI / Cloud Engineer (Contractor)*

Jun 2025 - Mar 2026

- Engineered and maintained AI-powered insurance and ERS chatbot systems on AWS Bedrock with Strands-based agentic frameworks and RAG pipelines, designing multi-state knowledge retrieval architectures backed by DynamoDB and Bedrock Knowledge Bases, enabling scalable, context-aware responses across multiple insurance products.
- Accelerated chatbot response efficiency by implementing semantic caching layers within Lambda-backed Bedrock invocation flows, reducing redundant LLM API calls and lowering inference costs across dev, QA, UAT, and production environments.
- Drove continuous dataset improvement by building user feedback ingestion pipelines into Bedrock Knowledge Bases and running RAG evaluation jobs to benchmark retrieval quality, enabling iterative refinement and sustained answer quality improvement.
- Built end-to-end observability infrastructure using AWS CDK, CloudWatch, CloudTrail, and SNS to monitor Bedrock API usage, guardrail violations, and authentication failures, providing real-time alerting and audit visibility across multi-region deployments.
- Provisioned cloud infrastructure via AWS CDK and YAML-based CI/CD pipelines, building Lambda functions, Step Functions, S3 buckets, and DynamoDB tables; managed sprint delivery through JIRA and GitHub with branch-based PR workflows, which kept releases on schedule and reduced deployment errors.
- Implemented Bedrock guardrails for content safety and compliance, and proactively remediated security vulnerabilities flagged by Wiz scanning by upgrading Lambda dependencies and hardening IAM policies across all environments.

Dreamline AI | *AI / Full Stack Developer*

Jun 2024 - Jun 2025

- Delivered an AI-powered RAG Q&A chatbot for the GreenZone Mapping platform by integrating OpenAI embeddings, FAISS vector store, and Mistral 7B on AWS SageMaker, enabling municipalities and NGOs to query clean energy policy data conversationally.
- Engineered React frontend, FastAPI backend, and AWS-deployed infrastructure (Lambda, EC2, S3), with YAML-based CI/CD pipelines ensuring seamless delivery across environments.
- Designed and implemented SQL Server database schema with normalized entity relationships covering geographic, demographic, property, and energy data, enabling structured querying and efficient data retrieval across the platform.

Capgemini | *Senior Software Developer*

Jan 2020 - Jul 2022

- Optimized enterprise database performance by developing stored procedures, SQL/PLSQL scripts, and indexing strategies across 100+ database objects, reducing query execution times by 25%.
- Built and deployed Django REST backend and React frontend for an analytics dashboard on AWS EC2 and PostgreSQL, streamlining reporting workflows and cutting manual effort by 20%.
- Awarded STAR and XTRA MILE recognition for innovation in application architecture and database optimization.

SKILLS

- Languages & Frameworks:** Python, JavaScript, Django, React.js, TypeScript, SQL, PLSQL, React Native, Tailwind CSS, FastAPI, REST API, Go
- AI / ML:** AWS Bedrock, Strands Agents, RAG Pipelines, Prompt Engineering, FAISS, SageMaker, NLP, Scikit-learn, NumPy, Pandas
- Cloud & DevOps:** AWS Cloud (Bedrock, CDK, SageMaker, Lambda, DynamoDB, CloudWatch and more), Docker, CI/CD Pipelines, Claude Code, GitHub, JIRA, Data Structures & Algorithms

PROJECTS

Serverless Health Analytics | *HealthForge*

- Built a serverless weekly health report pipeline on AWS (CDK, Lambda, Step Functions, DynamoDB, SES, API Gateway, SQS) that ingests Apple Health data via REST API, computes weighted scores with 30-day baselines and anomaly detection, generates AI insights via Gemini, and delivers an HTML dashboard email.

AI-Powered Email Summarization Assistant | *Mailliam*

- Built an AI-driven email assistant using LLMs, Gmail API, Google OAuth, FastAPI, and Supabase to fetch, classify, summarize emails and generate reply recommendations via an intuitive React interface.
- Implemented retrieval-augmented summarization with context-aware LLM prompting, enabling accurate email insights and reducing information overload for end users.

EDUCATION

California State University Fullerton | *Master of Computer Science, Computer Science (GPA: 3.74)*

CERTIFICATION

- AWS Certified Developer – Associate
